DISCOVERING

EARTH'S FINAL FRONTIER:

A U.S. STRATEGY FOR OCEAN EXPLORATION

The Report of the President's Panel for Ocean Exploration

President's Panel

- **Systematic mapping of physical, geological, biological, chemical and archaeological aspects of the ocean**
- **Exploring ocean dynamics and interactions at new scales**
- **Developing new sensors and systems for ocean exploration**
- **Reaching out in new ways to stakeholders**
- **NOAA started the Ocean Exploration Program**

NOAA Ocean Exploration

- ***Mission***

To support NOAA and national objectives by exploring the Earth's largely unknown oceans in all their dimensions for the purpose of discovery and the advancement of knowledge, using state-of-the-art technologies in evolutionary and revolutionary ways.

Ocean Exploration

Ocean Exploration is not traditional scientific investigation ... it requires a different approach -- and a different mindset

RESEARCH --> ANALYSIS --> ANSWERS

EXPLORATION --> DISCOVERY --> QUESTIONS

Ocean Exploration

- We envisioned a program that expanded on the current proposal responsive system but integrates this with a newly REdiscovered paradigm for Ocean Exploration

A dedicated **ship of discovery** carrying out a systematic program of exploration linked through **telepresence** to the scientific community, the media and the general public

NOAA Ship *OKEANOS EXPLORER*

America's Flagship for Exploration *Commissioned, August 2008*

Primary operational capabilities:

- ***State-of-the-art swath sonar***
- ***Dedicated 6000 m ROV***
- ***Telepresence system***

Status

- ***Mapping system initial tests successful***
- ***Telepresence system progressing***
- ***ROV system testing in April 2009***
- ***Field trials scheduled May - October***

Expedition Planning Workshop

- “BOXES and STICKS” concept
 - BOXES - target regions of high interest (low hanging fruit) for focused exploration (but not full-blown research)
 - STICKS - transits through unknown, poorly studied regions where reconnaissance mapping and sampling would take place at transit speeds - leading to unpredictable discoveries

Okeanos Explorer

- Name: *Okeanos Explorer*
 - » from the Greek "Okeanos," for ocean
 - » Named through a high school ship naming competition
- History: Former Naval surveillance T-AGOS Class ship
 - » USNS Capable
- Length: 67 m Breadth: 12 m Draft: 4.5 m
- Berthing: 46
- Commissioned: August 2008
- Run by OMAO; Mission equipment operated by OE
- Mission: Mapping, reconnaissance, site characterization, and education and outreach.

Exploration Modes

Mapping Goals

Reconnaissance - searching unknown areas looking for anomalies that will initiate site characterization.

Large area coverage

Water Column Exploration : (1) characterize water masses during transits through poorly known areas; (2) search for anomalies that will initiate site characterization;

Water column mapping

Site Characterization - focused on a specific target with high discovery potential & utilizing all systems.

Ability to detect small features

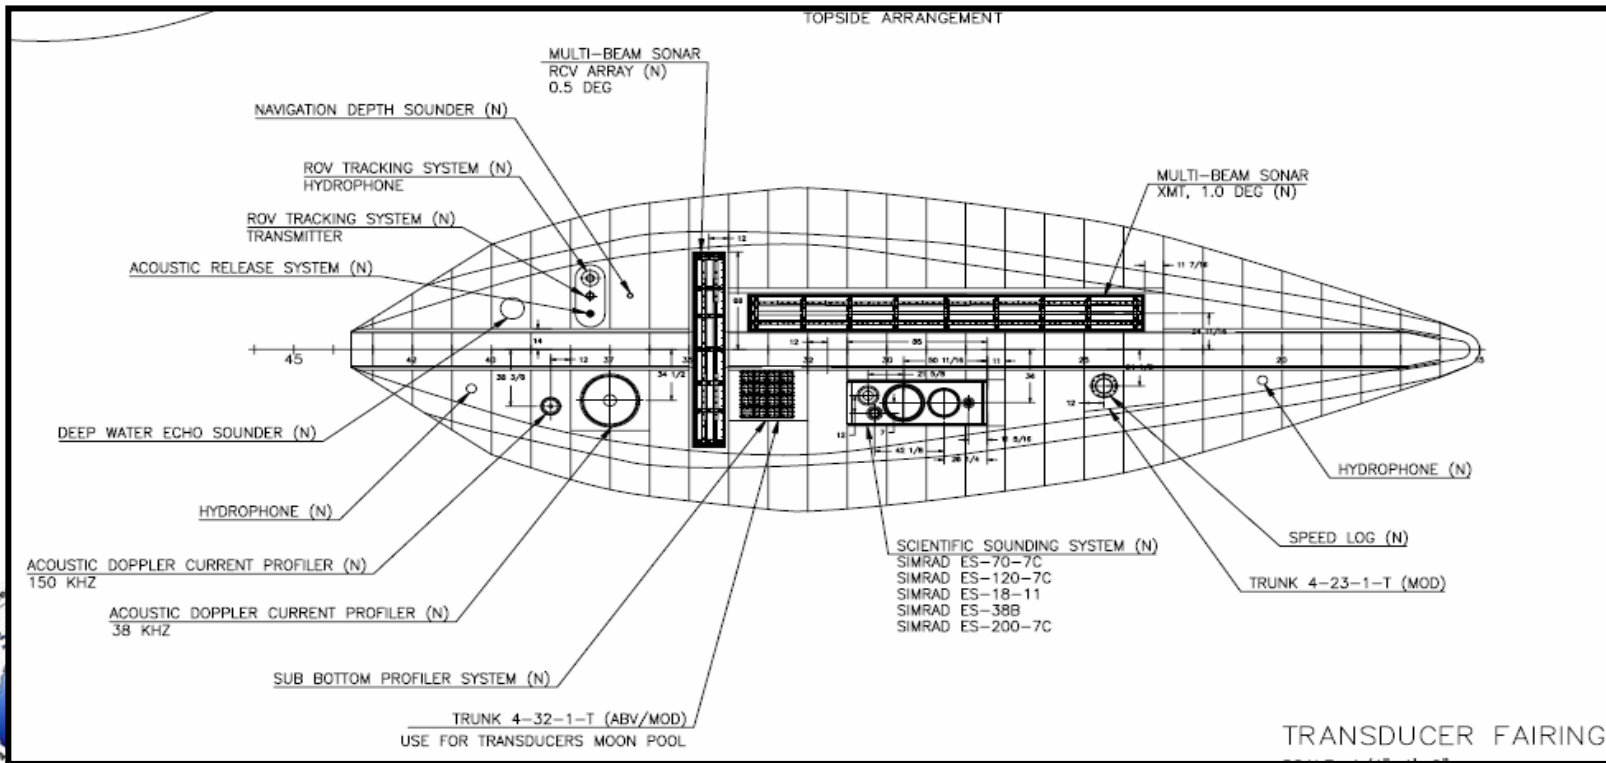

OKEANOS EXPLORER: Primary Mapping Systems

- Kongsberg EM302 (30 kHz) multibeam sonar ($0.5^\circ \times 1.0^\circ$)
- Kongsberg EA600 deepwater echosounder
- Knudsen Model Chirp 3260 sub-bottom profiler

EM 302 installation and testing

- An external fairing was added during refit

OKEANOS EXPLORER: Ancillary Gear

HARDWARE

- **C-Nav** (global navigation system)
- **POS/MV**
- **TSG**
- **XBT and CTD**
- **Netapps** (data storage)

SOFTWARE

- **SIS**
- **Hypack**
- **Caris**
- **Fledermaus**
- **Mapinfo**
- **ArcGIS**
- *Geocoder*
- *SonarWiz*

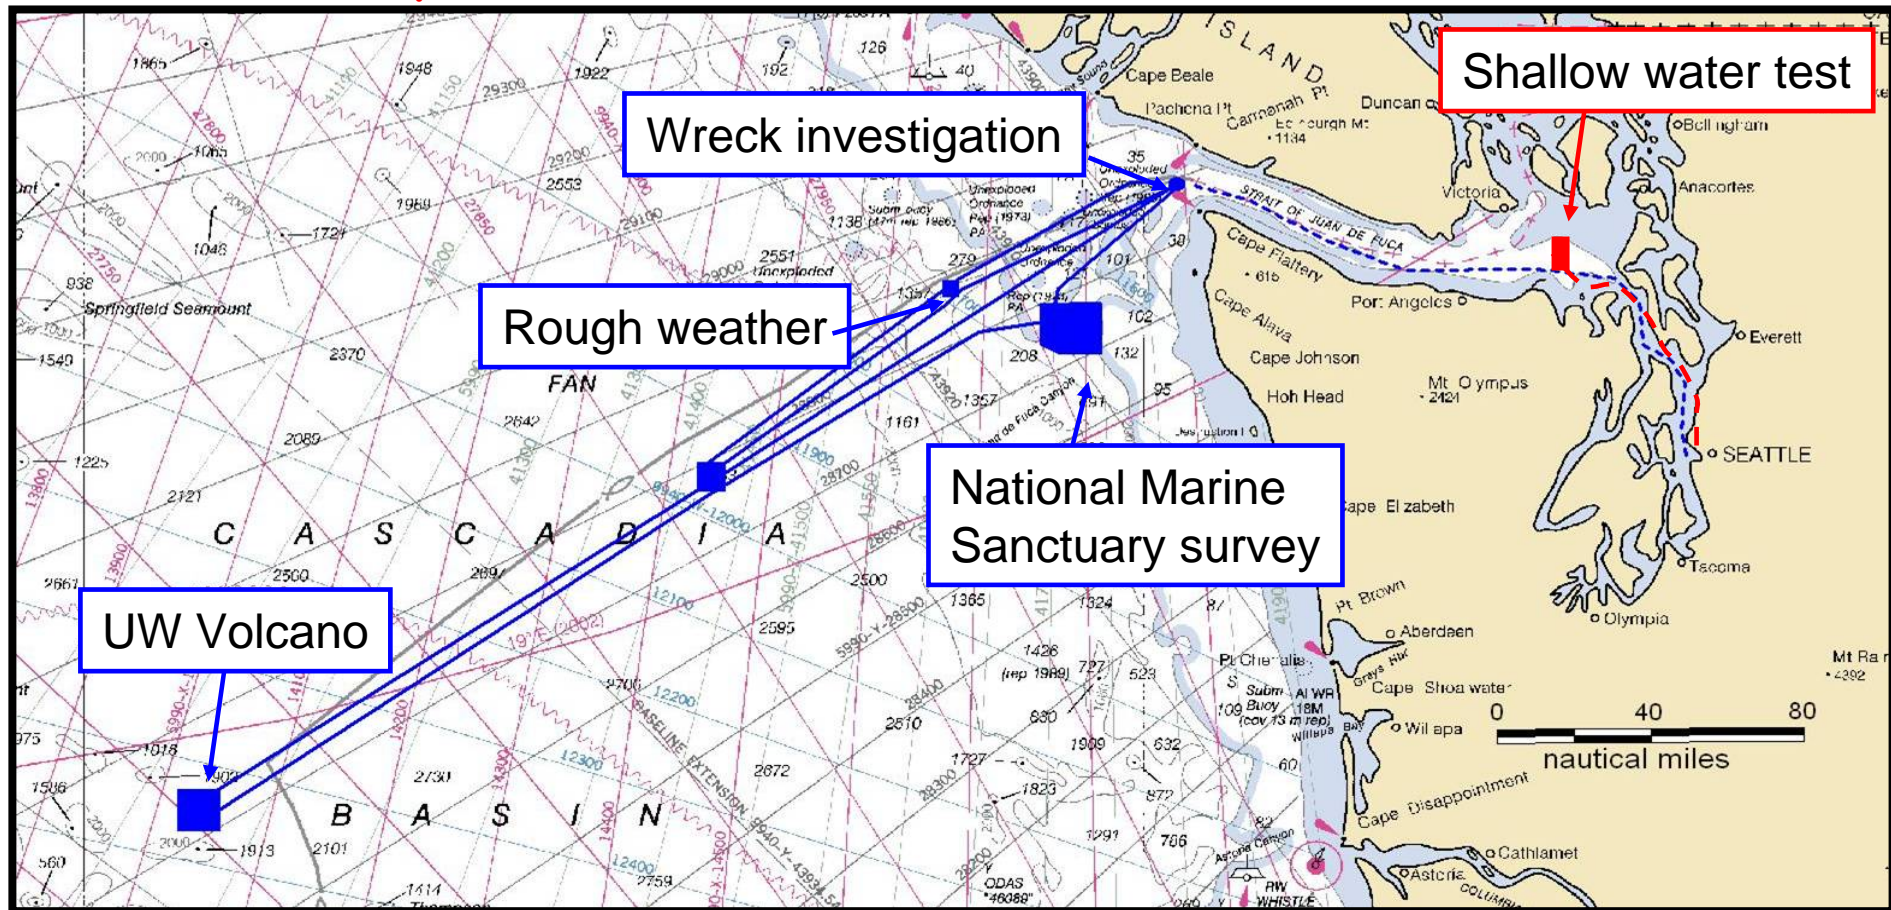

OKEANOS EXPLORER: SAT and Shakedown

- **Sept 8 - 25, 2008 (Initial tests)**
 - One-week of system acceptance w/ Kongsberg
 - Two-weeks of system shakedown testing
- **March 31 - April 3, 2009 (New version of EM302 software / SIS / POS)**

Test parameters

- **Unless noted otherwise:**
 - Vessel speed 8 kts
 - Opening angle 130 deg
 - 432 soundings per swath
 - Multiping mode
- **Sept 2008 tests**
 - POS MV V3
 - EM 302 software release 1.04 (September 2008)
 - SIS 3.5.1 (July 2008)
- **April 2009 tests**
 - POS MV V4 3.30
 - EM 302 software 1.05 (December 2008)
 - SIS 3.6.1 (Nov. 2008)

Wreck Investigation ~240 m water depth

USS BUGARA

US Navy Photo

Investigation of the USS Bugara, a decommissioned US Navy submarine lost off Cape Flattery in 1970 with no loss of life. Wreck site surveyed using a Kongsberg EM302, 1° x 0.5° multibeam sonar system.

NOT FOR NAVIGATION

NOAA Ship Okeanos Explorer

Joseph A. Pica
CDR Joseph A. Pica

Project: EX Mapping Shakedown
Survey: USS Bugara
State: Washinton
Locality: Olympic Coast NMS
Sub-locality: Cape Flattery
Survey Scale: 1:10,000

Date: 22 Sept 08
Sounding Units: Meters
Horizontal Datum: NAD 83
Projection: UTM 10
Central Meridian: 123° 00 00
Scale Factor: 0.9996

Dimensions:

Length 95 m; Beam 8.3 m (Dictionary of American Naval Fighting Ships);

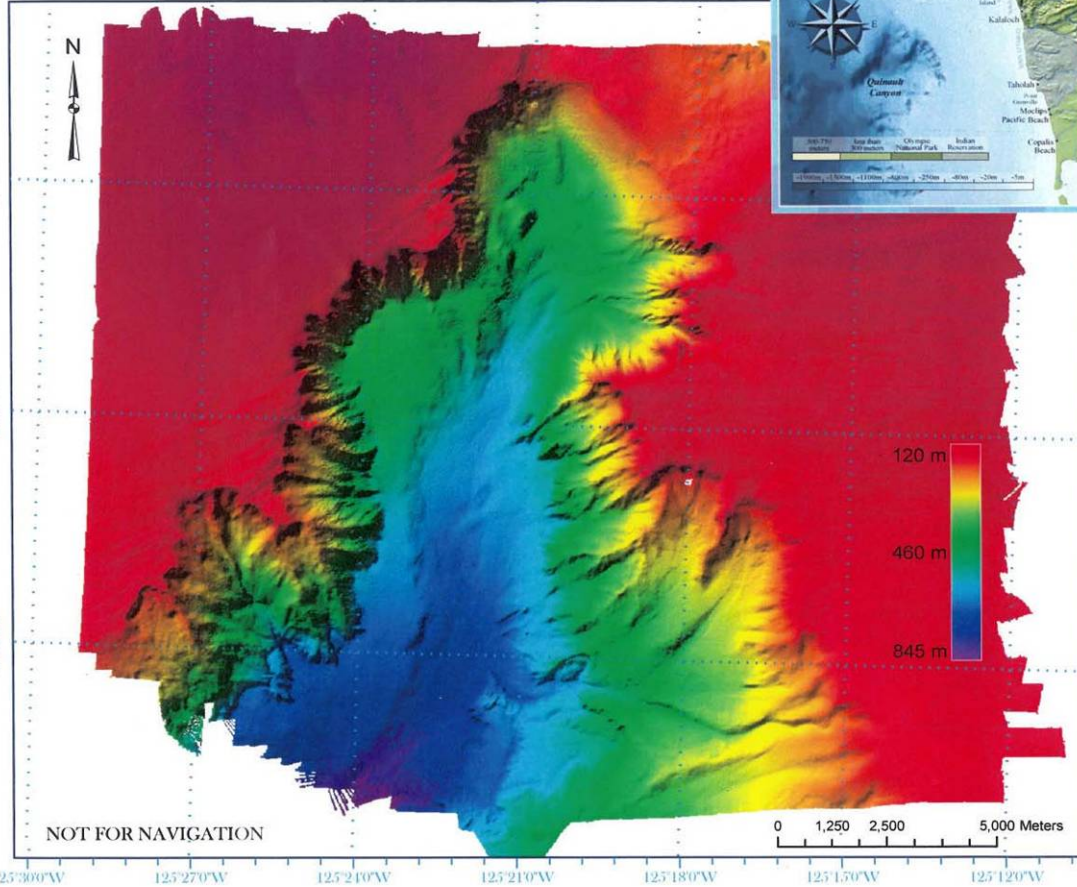

Olympic Coast National Marine Sanctuary

Juan de Fuca Canyon

*FIRST Exploration Survey by the
NOAA Ship Okeanos Explorer
September 2008*

Survey Stats

- Lines = 87
- LNM = 393 nm
- SQNM = 108
- # of Soundings = 174,950,496
- Time = 60 hrs
- Sea-state 2-4
- Water depth 120 - 845 m

March/April 2009 Results

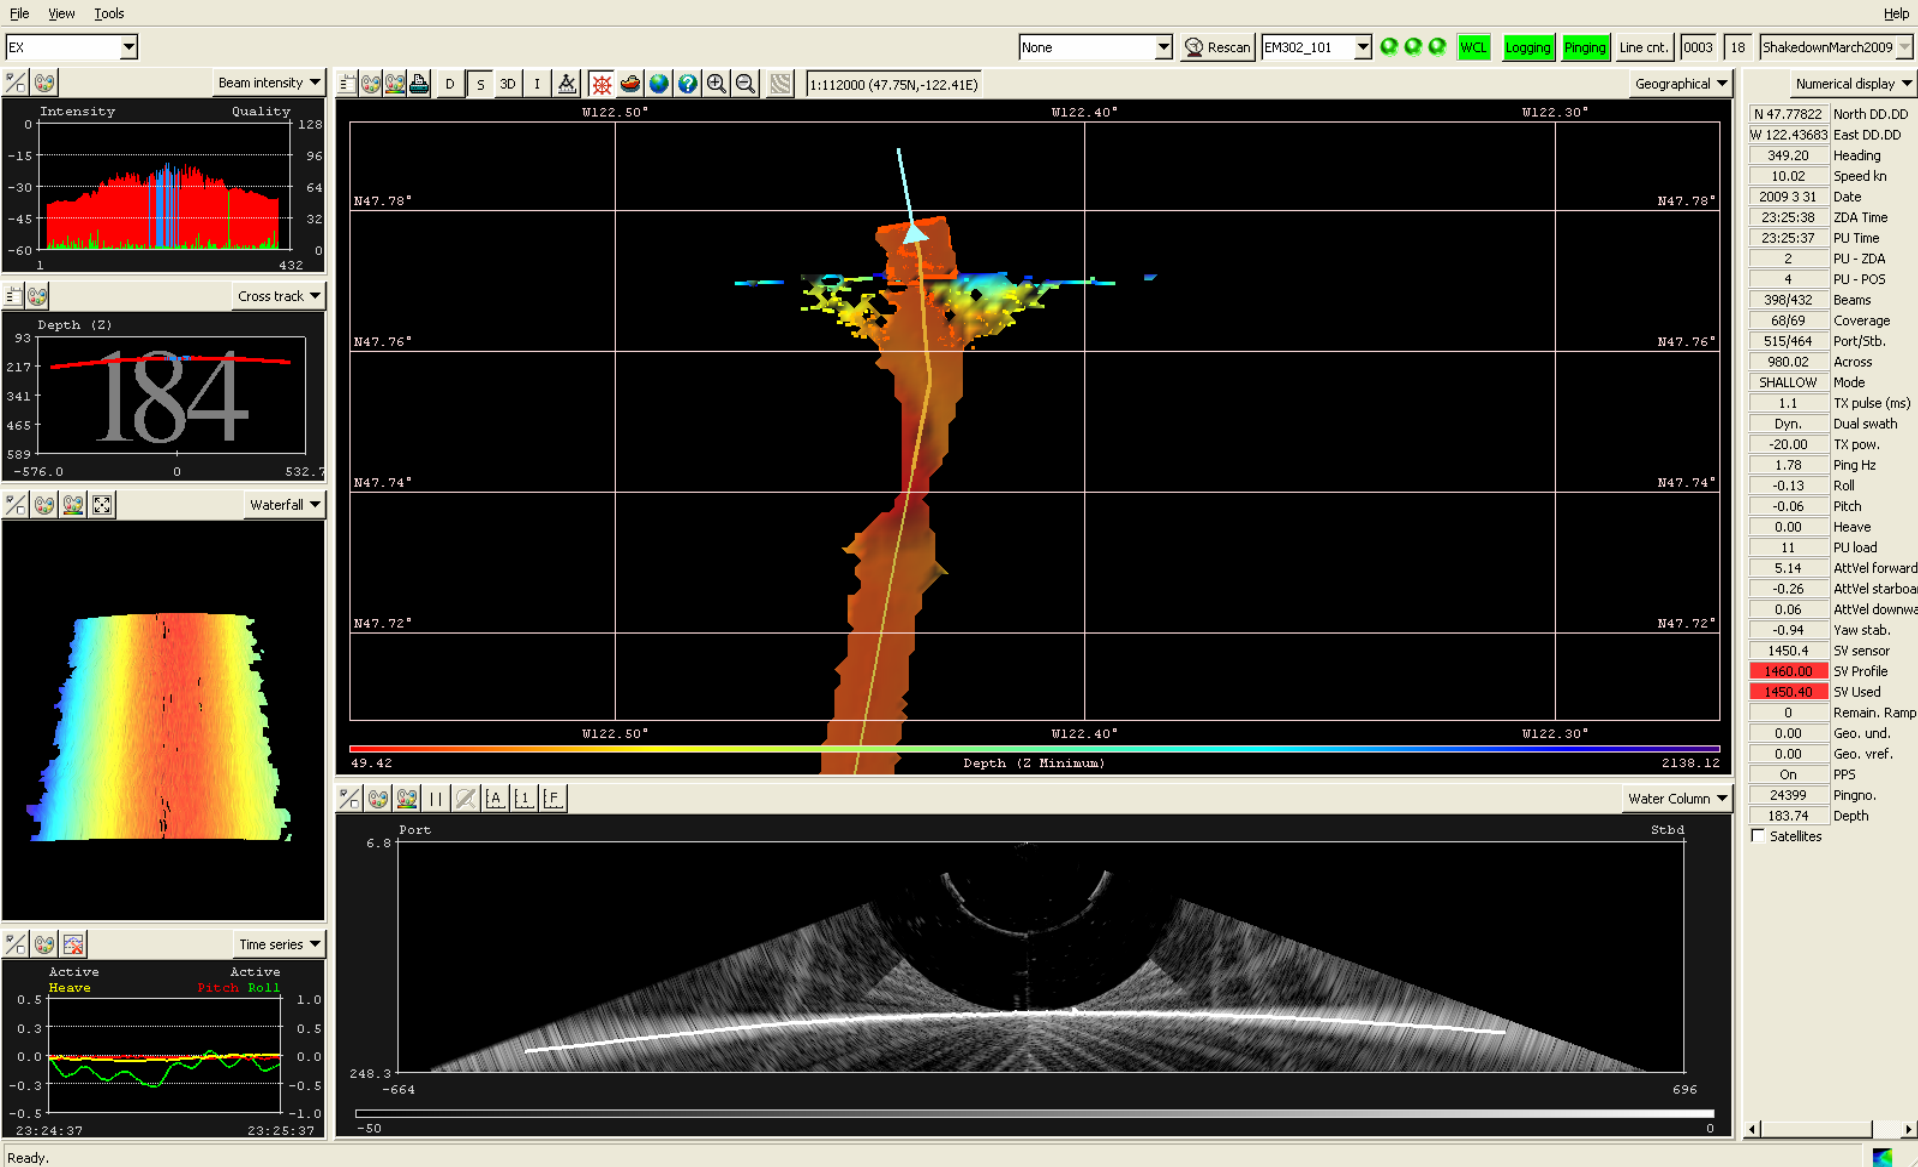

- New versions of SIS, EM302 software, POS MV
- Brought Knudsen Chirp 3260 online
 - interference
- Near-nadir "anomaly"
- Cross lines checks
- Backscatter calibration implementation and issues?

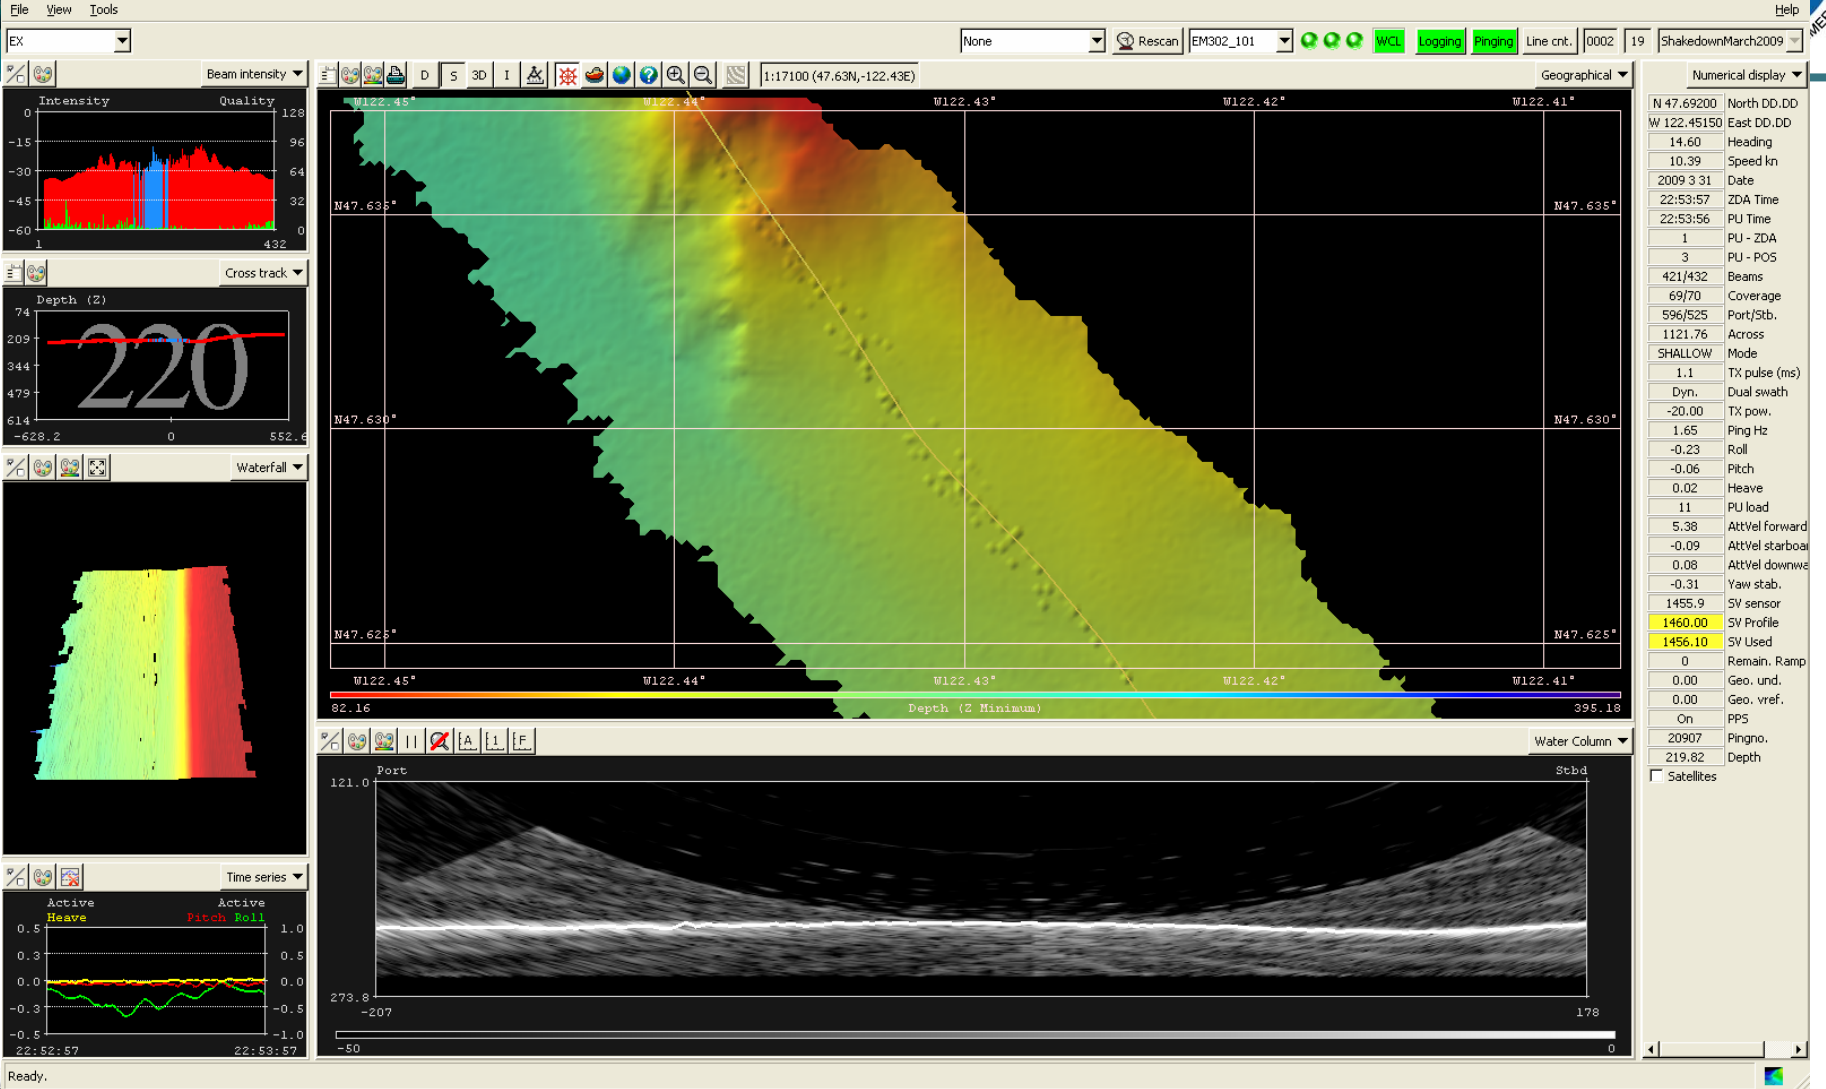

Interference with Knudsen Chirp SBP

Near nadir anomaly

Independent of Knudsen and other sensors
More pronounced in hard bottom areas

UNIHORNS????

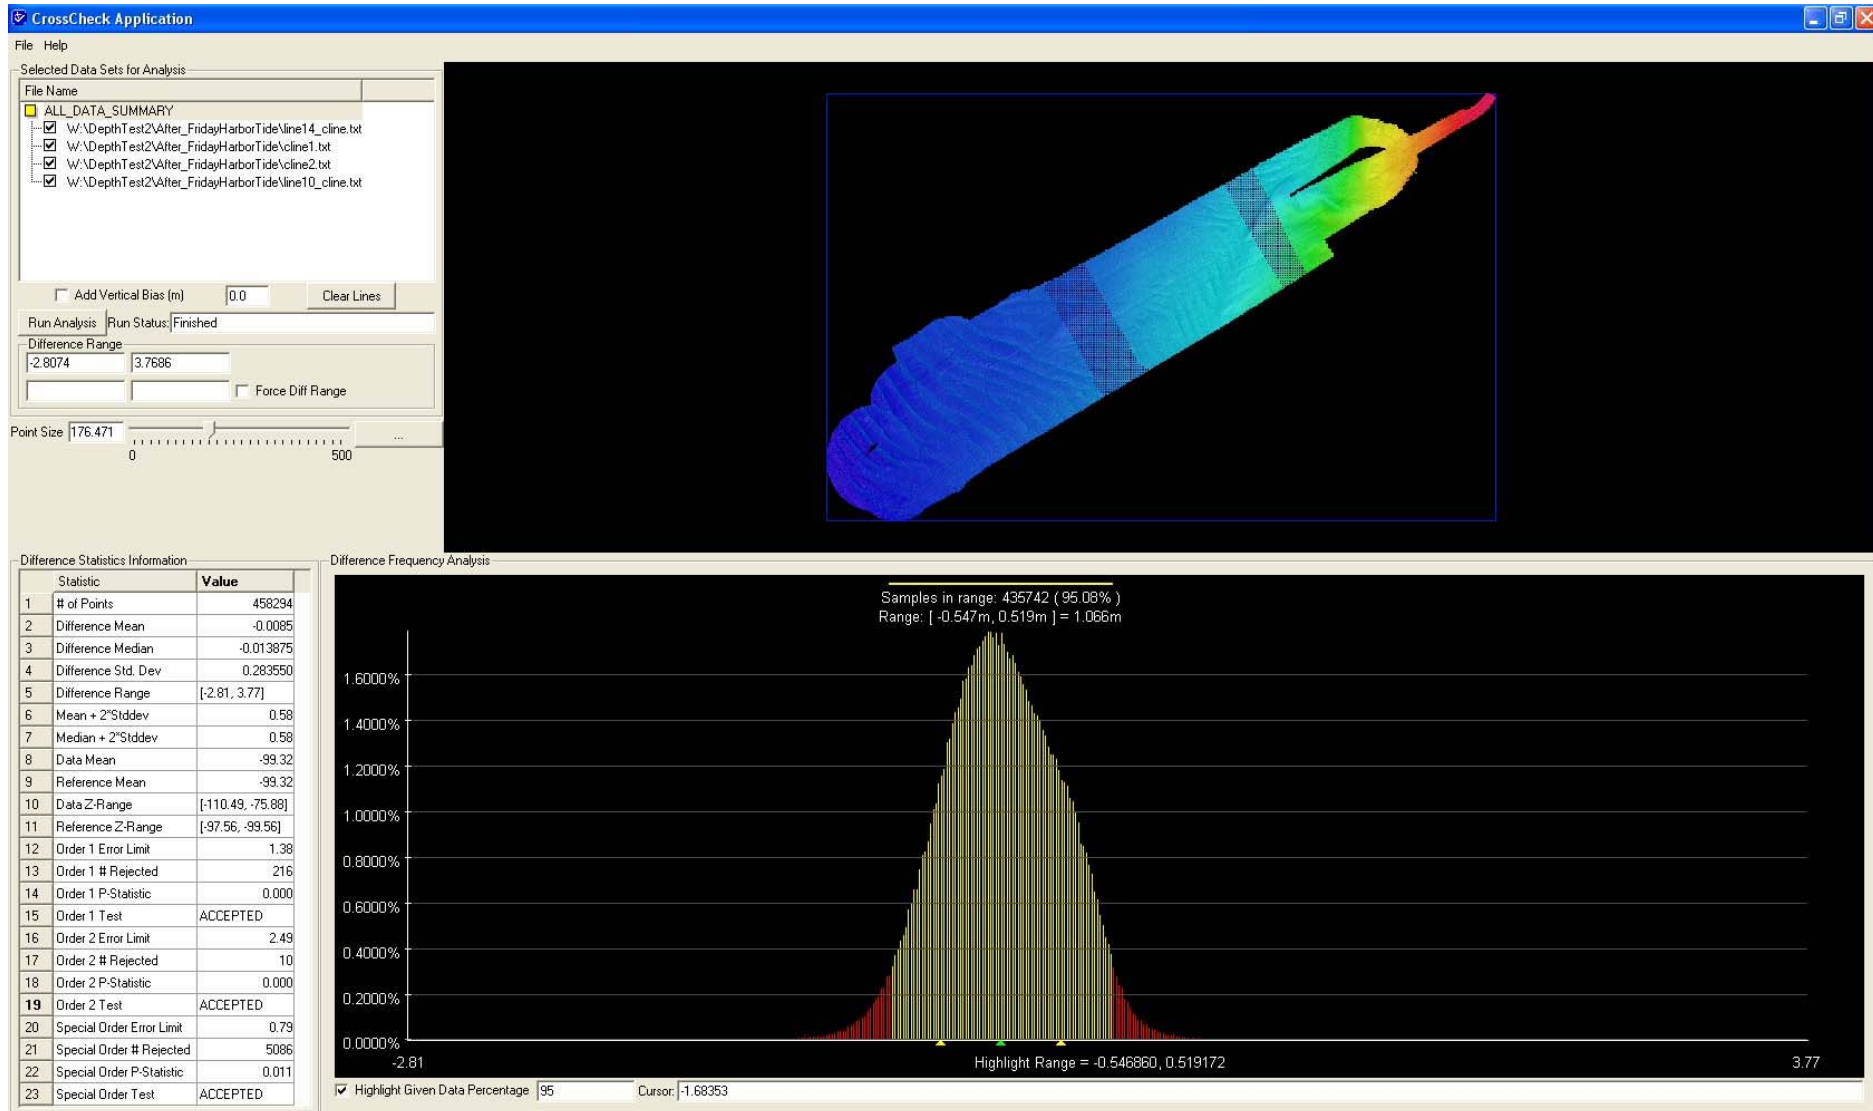

Water column data examples showing near nadir artifacts

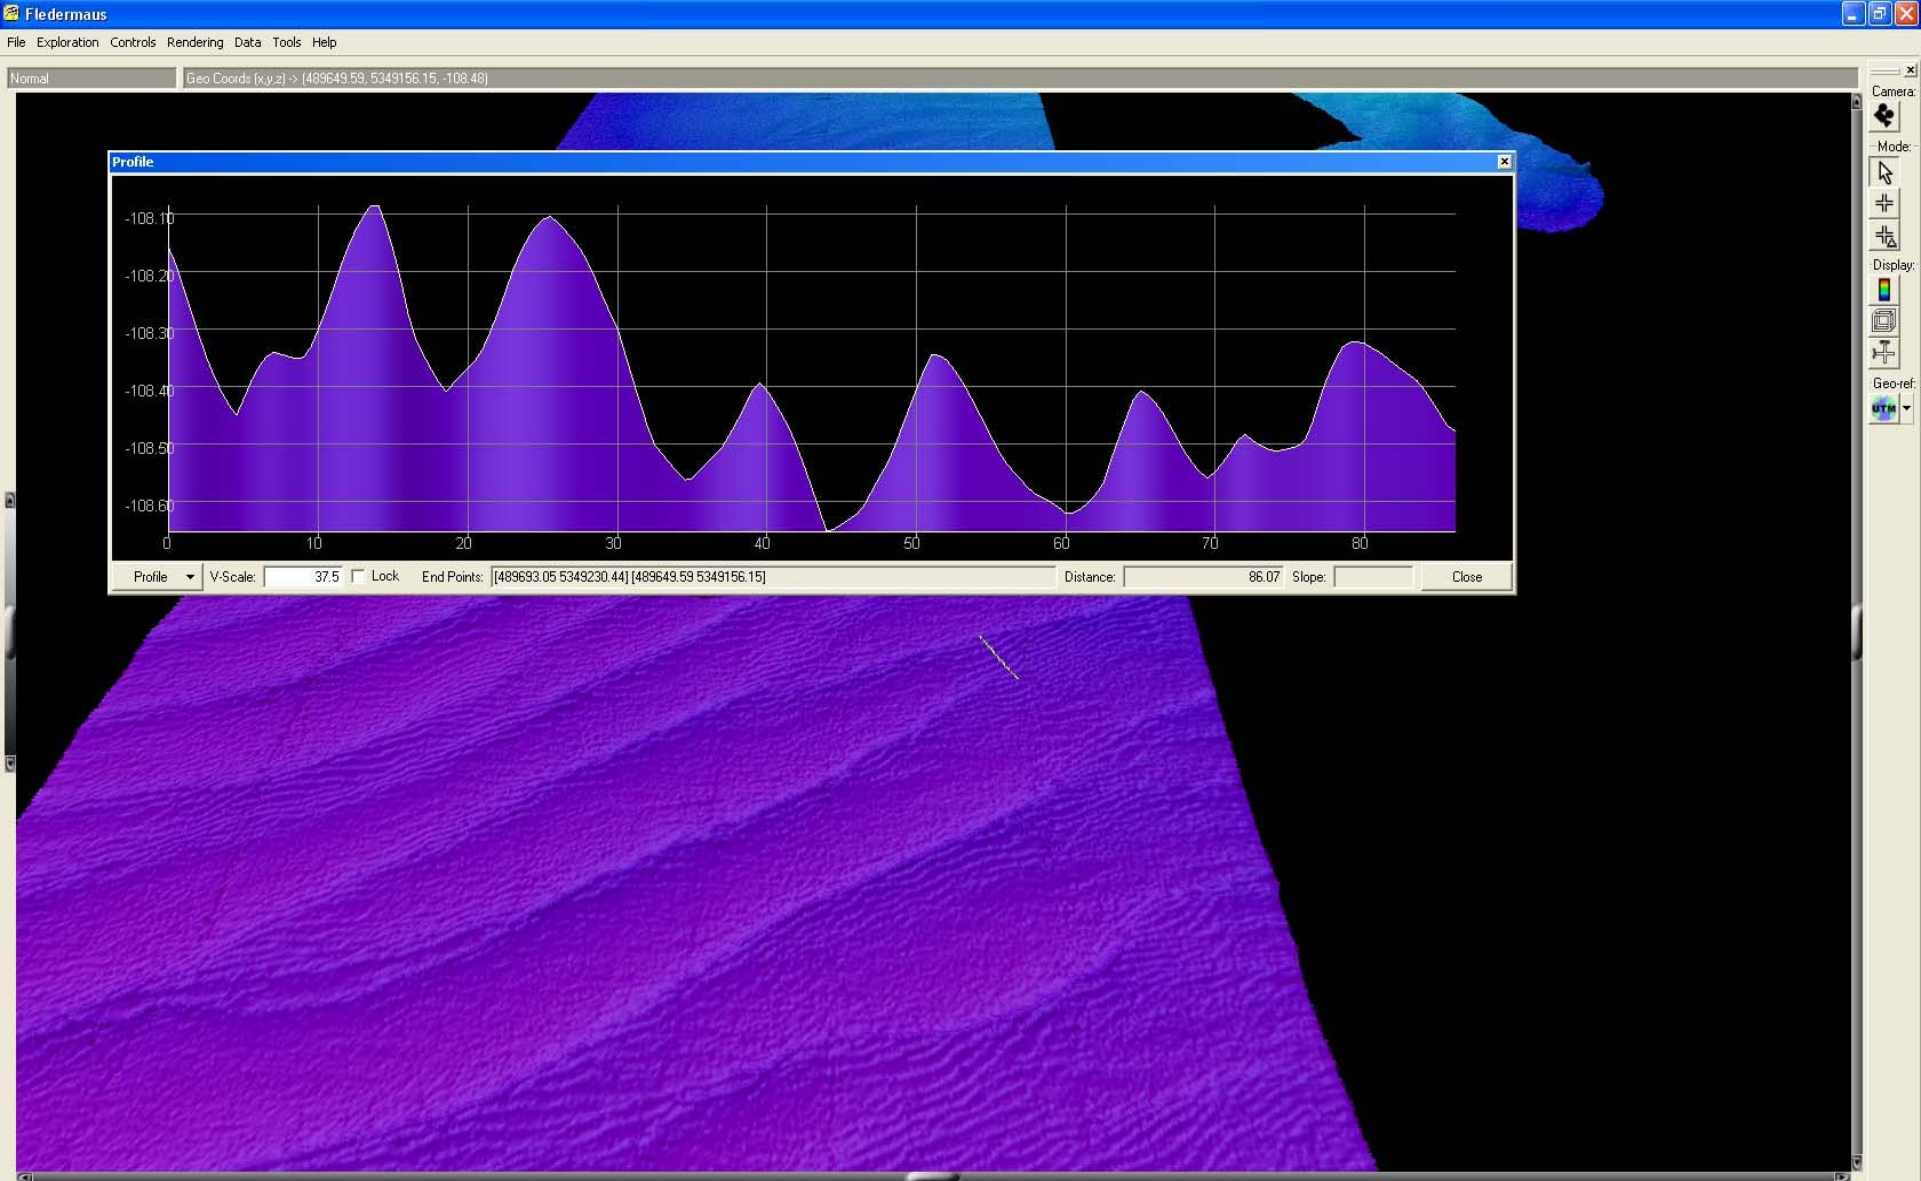

Cross Line Checks (April 2009)

(removing “near-nadir anomalies”)

Water depth ~ 100 m
Difference Mean = -0.0085 m

Data passed Special Order test
Mean + 2*std dev. = 0.58 m

EM 302 bathymetry differentiated sand ripples as small as 15-30 cm in 100m of water ("near-nadir anomalies" removed).

Beam Averaged Backscatter (April 2009)

Backscatter processing tool: Geocoder
Depth ~ 30 – 130 m

Full Time Series Backscatter (April 2009)

Backscatter processing tool: Geocoder
Depth ~ 30 – 130 m

EM 302 Water Column Data

File Sizes expectations (Bottom depth and Backscatter)

File sizes expectation (Water column)

File sizes expectation

Outstanding issues

KONGSBERG:

Needed:

- Understand near-nadir anomalies
- Questions about full-time series BS as well as seafloor and water column BS calibration
- EM 302 integration with helmsman display and DP system

Desired:

- EM 302 error model

Outstanding issues

NOAA needs to:

- Further establish accuracy and resolution achievable
 - Depth, Backscatter, water column mapping
- Understand system limits (deep and shallow water)
- Work on elimination of interference with other sensors (SBP etc.)

Address bubble sweep issues

Thank You

Questions ?

Multibeam EM 302 file size expectations

WCD data files ~ 5.3 times (at 2550 m depth)
~ 4.2 times (at 150 m depth)

- Introduction

- Re-thinking Ocean Exploration
- Ocean Exploration mapping goals

Agenda

- EM 302 installation and testing
- EM 302 outstanding issues
- Conclusion
