

Ocean Exploration CTD Summary, EX2102_CTD001_20210515

This form contains metadata information summarizing CTD casts completed in support of ocean exploration objectives. All CTD data is archived with the National Centers for Environmental Information. For CTD specific or expedition specific inquiries, please contact oceanexplorer@noaa.gov. For assistance with data access, please contact ncei.info@noaa.gov.

Table 1. General Expedition and CTD information

Expedition Name	2021 Technology Demonstration
Project ID	EX-21-02
CTD Cast Date (UTC)	May, 15, 2021
CTD Cast Name	EX2102_CTD001_20210515
CTD Number	CTD001
Expedition Coordinator	Michael P. White, NOAA Ocean Exploration/Cherokee Federal
Mapping Lead	Derek Sowers, NOAA Ocean Exploration/Cherokee Federal
Science Lead	Katharine Egan, NOAA Ocean Exploration
Science Lead	Meredith Everett, NOAA Northwest Fisheries Science Center
CTD Operator	Danielle Power, NOAA Ship <i>Okeanos Explorer</i>
General Area Descriptor	U.S. Southeast
Site Name	Port Canaveral East

CTD Purpose	Collect water samples for eDNA analysis
--------------------	---

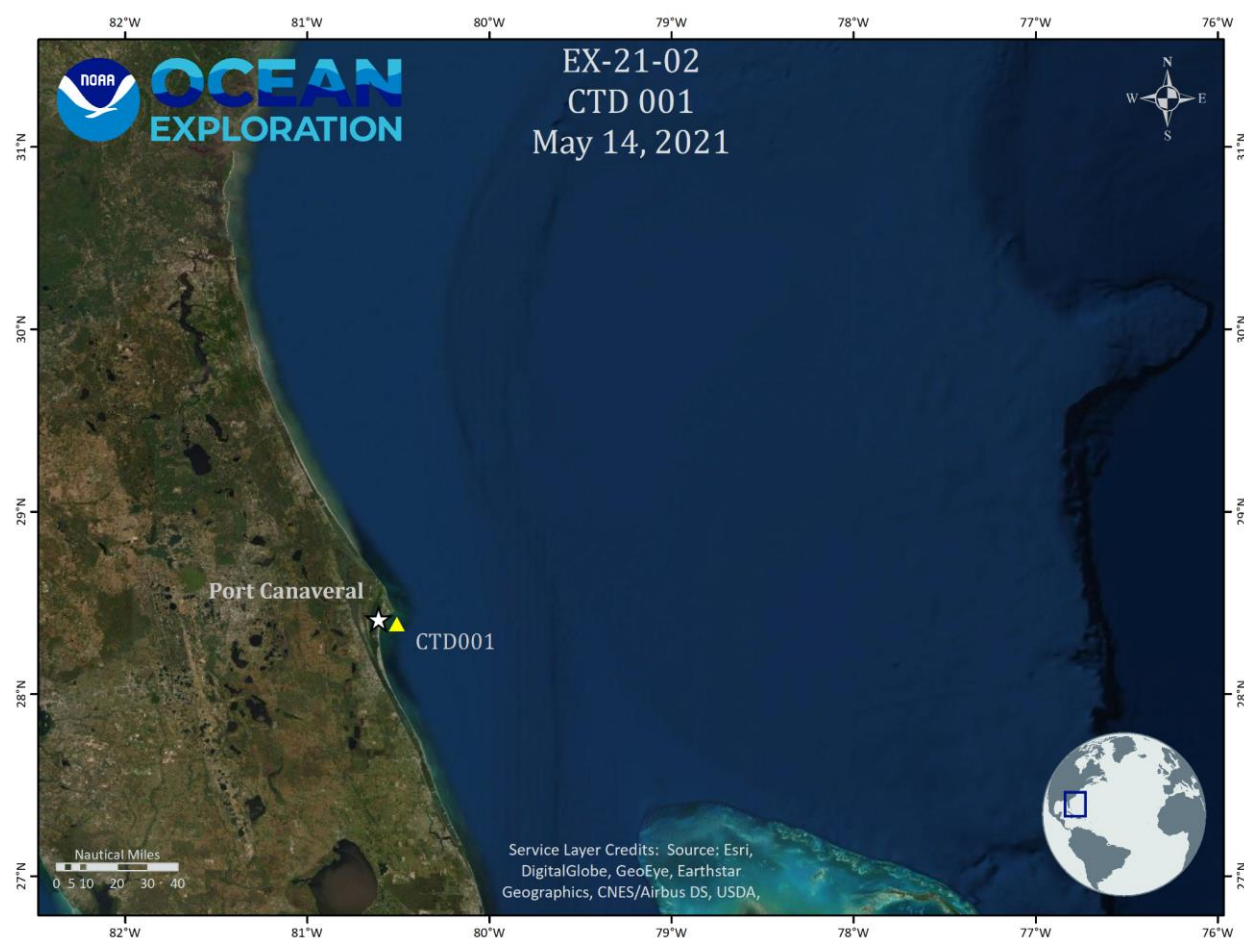

Figure 1. Map of CTD001 Location (yellow triangle)

Table 2a and 2b. CTD Cast Location, Depth, Time and Sensor Data

2a. Locations are the ship's position. Coordinates in World Geographic System 1984.

Deployment latitude/longitude (decimal degrees)	28.38146°	-80.51023°
--	------------------	-------------------

Deployment Time (UTC)	10:26:49	
CTD Max Depth (meters)	7.729	
Recovery latitude/longitude (decimal degrees)	28.38146°	-80.51024°
Recovery Time (UTC)	10:32:57	

2b. Environmental Sensor Information

Sensors are calibrated yearly or more frequently as required. Calibration information and files are stored with the sensor data.

Data Type	Sensor Name	Collected (Yes/No)	Data Issues/Notes
Depth	SBE-9plus	Yes	
Conductivity 1	SBE-9plus	Yes	
Conductivity 2	SBE-9plus	Yes	
Temperature 1	SBE-9plus	Yes	
Temperature 2	SBE-9plus	Yes	
Dissolved Oxygen	SBE-43	Yes	
Turbidity	ECO-FLNTU	No	Cover was not removed
Oxygen Reduction Potential	PMEL	Yes	

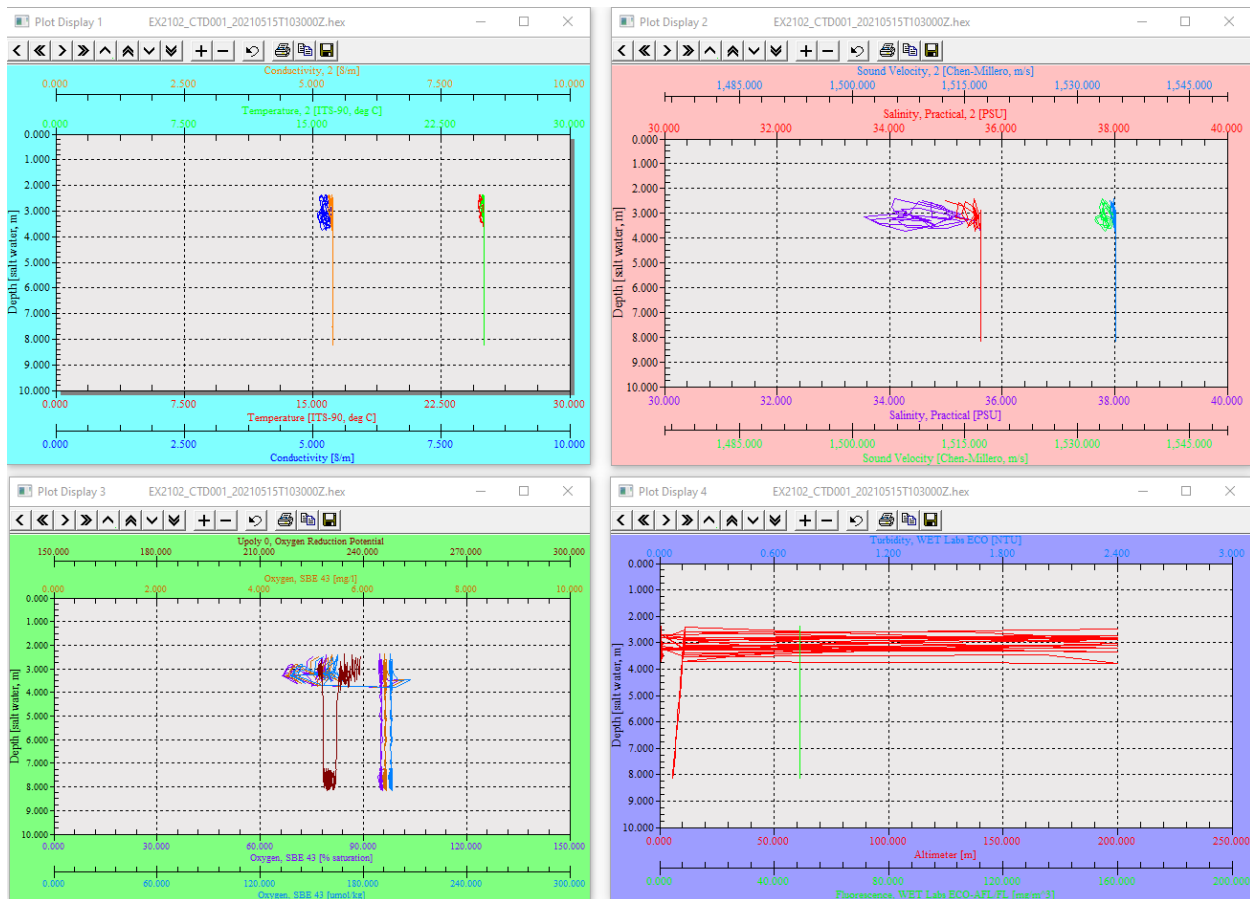

Figure 2: Plots of CTD Data. Conductivity and temperature are in the upper left, salinity is in the upper right, oxygen and oxygen reduction potential are in the lower left, and the turbidity and fluorescence are in the lower right.

Water Sample Collections

<p>Purpose of Water Sample Collection</p>	<p>Samples were collected for onshore eDNA analysis</p>
--	--

Description of processing/analysis at sea	2 liters of seawater from each Niskin bottle were filtered through a 0.45 µm filter. Filters were stored in 5 mL Eppendorf tubes containing 3 mL of Longmire's Buffer solution.
Description of at-sea storage	Sample filters were stored in a Longmire's lysis buffer solution

Table 3. Niskin Bottles and Depth

Niskin Bottle Number	Time (UTC)	CTD Depth (meters)	Notes
1	10:30:00	7.452	
2	10:30:14	7.952	
3	10:31:03	2.699	
4	10:31:13	3.08	
5	Not fired		
6	Not fired		
7	Not fired		
8	Not fired		
9	Not fired		
10	Not fired		
11	Not fired		
12	Not fired		

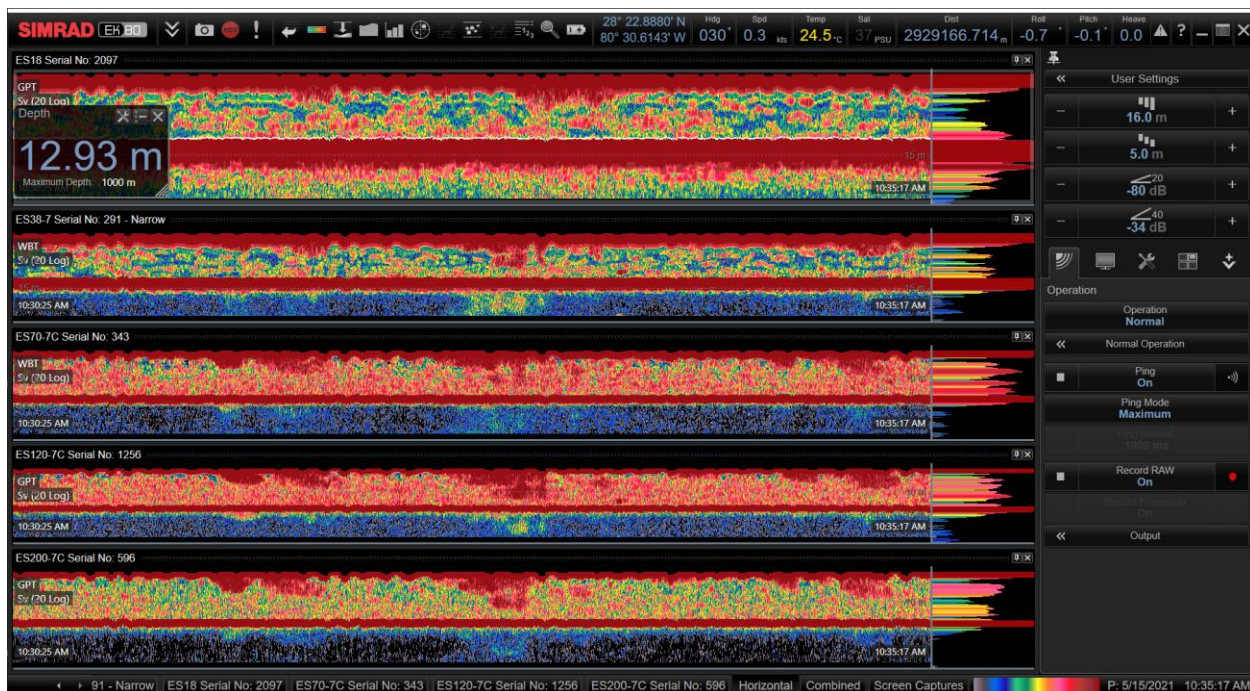

Figure 3. Screenshot of the EK60 sonar data at the CTD cast location.

Notes:

Archived .cnv file is the downcast data. Achieved using NMEA time.
